**DIAMOND FIBERGLASS RELOCATES WASHINGTON PIPE
MANUFACTURING OPERATIONS TO VICTORIA, TEXAS.**

Victoria, TX, February 19, 2019 -- Diamond Fiberglass, a leading fabricator of engineer-to-order fiberglass reinforced plastic (“FRP”) vessels and pipe announced today that it is relocating its Burlington, Washington pipe manufacturing operations into its Victoria, Texas manufacturing facility.

Diamond Fiberglass acquired the assets of Fibrex Corporation in March of 2017 and continued operations under a two-year facility lease. “The Fibrex asset acquisition and Burlington pipe operations were a key contributor to our success over the past two years.” stated Don Porr, President of Diamond Fiberglass. “During this time period, we successfully unified the Fibrex IntegraLine™ pipe product with our other offerings, and completed many complex, custom FRP pipe projects on-time and on-budget for our customers.”

Porr continued, “The relocation provides many benefits to Diamond’s customers. It will allow us to co-locate the pipe manufacturing with our field service and installation team, Diamond Services. It will also allow us to reduce both overhead and freight costs, which will make the IntegraLine™ pipe more competitive in key markets.”

The relocation is expected to be completed within the next three months.

About Diamond Fiberglass

Established in 1986, Victoria, Texas based Diamond Fiberglass manufactures custom engineered Fiberglass Reinforced Plastic vessels and pipe. Founded on a commitment to excellent customer service, quality, and unmatched industry expertise, the company continues to build on that tradition today and maximize value for its customers.

Diamond serves the Air Pollution Control, Food Processing, General Chemical and Water and Wastewater Industries on a nationwide basis. Products include Single/Double Wall Storage Tanks, Mix Tanks and Process Vessels, FRP pipe, and on-site field services.
