

Andronaco Industries has a long history as a leading **US-based manufacturer** of high-performance fluid management and flow control products for demanding and highly corrosive applications.

*Example of our lined composites Total Systems Turnkey™ approach; also available for unlined composites & lined metal systems*

## Total Systems Turnkey™ Approach

- Andronaco Industries, supported by Diamond Fiberglass Systems and Services, is a Total Systems Turnkey™ provider
- Andronaco and Diamond are unique in that we provide field services as well as manufacture a broad product line consisting of multiple materials of construction
- Our products include lined metallic and nonmetallic piping and fittings, valves, expansion joints, hoses, system accessories, pumps, and vessels/tanks

No other manufacturer in this space brings together your end-to-end product needs in combination with field services for your safe and reliable operations. Our goal is to increase your uptime while also lowering the total cost of ownership.

## Key Markets Served

- Chemical Manufacturing
- Food & Beverage
- Mining of Metals & Minerals (including lithium)
- Natural Gas Distribution
- Pharmaceutical
- Power Generation
- Pulp & Paper
- Semiconductor
- Steel Processing
- Water & Wastewater Treatment (municipal and industrial)

## Our Leading Brands

Nil-Cor® composite valves provide an ideal combination of lightweight, strong, and corrosion-free features for nonmetallic systems. Nil-Cor® valves are available in a full range of ball, butterfly, and check valves.

Durcor® is the world's first and only corrosion resistant composite piping system lined with a seamless fluoropolymer liner. The proprietary design and manufacturing method make Durcor® strong and lightweight.

PureFlex® fluoropolymer-lined hoses are a complete line of smooth bore, convoluted and rubber covered transfer hoses. In addition, the PureFlex® brand offers TASK-LINE® gaskets and Blue-Line™ expansion joints.

Diamond Fiberglass manufactures custom-engineered FRP vessels which are available with ASME RTP-1 certifications from locations in Houston and Victoria, Texas.

ChemTite™ Ethylene® fluoropolymer lined metal products include pipe and fittings, expansion joints, valves, strainers, dip pipes, and sight flow indicators. Our fluoropolymer liners meet the ASTM F1545 standard.

Conley Composites filament wound vinyl ester or epoxy FRP pipe products are available with hand lay-up fittings. Additionally, Conley Composites offers continuous cast vinyl ester FRP pipe.

Fibrex provides specialty piping systems inclusive of filament wound and hand lay-up options. Fibrex products have an extensive size range which can be tailored to customer needs.

Diamond Services specializes in nonmetallic field services for general maintenance, repairs, and installations for major projects and turnarounds.

Endurance Composites™ offers dual laminate FRP piping systems with liner options to withstand abrasive and high temperature applications.

Hills-McCanna® diaphragm valves are ideal for applications with corrosive fluids or abrasive slurries where reliable shut-off and control is key. Available options include lined or unlined metal and solid plastic.

RamParts® Pumps are heavy-duty diaphragm pumps suited for heavy sludges and slurries. These pumps are available lined and unlined to best meet specific application needs.

Polyvalve® polyethylene ball valves are available for gas, chemical, and water applications. Poly-Gas® has been trusted for decades in natural gas distribution. Poly-Water® valves are NSF certified.
